DATE OF INFO.

May - September 1951

SUPPLEMENT TO REPORT NO. 80-49149x

DO NOT CIRCULATE

THIS IS UNEVALUATED INFORMATION

SOURCE [REDACTED] second interrogation. \*\*

- During the period from May to September 1951 three light phenomena happening at intervals of about 15 minutes were seen almost every night between 9 and 10 p.m. local time. The phenomena were watched from the PJ camp in Palvta Aral, about 50 km southwest of Tashkent (41°28'N/69°15'E), Uzbek S.S.R., in an east-southeasterly direction.
- A darked ball of fire was seen first; after about six seconds it reached the apex of a long-drawn out trajectory. During this time the ball developed a trail of fire. Its color, which was bright red at the apex point, changed in color from pale green to white. Smoke trails, noises, or detonations were not noticed.
- The distance of the trajectory from the point of observation was estimated at 50 to 80 km. The trajectory ran approximately from southwest to northeast; its length to the apex, which was from 5,000 to 12,000 meters high, as estimated at about 80 km. At the apex the ball of fire seemed about one-fifth the diameter of the full moon.

\* Field Comment. The measurements stated with respect to the trajectory must be received with reserve. It must be considered that neither the discharge nor the noise developed by the projectile were heard. For trajectory of phenomena, see annex.

\*\* Washington Comment: This is a reinterrogation of the informant of 80-49149x.

1 Annex: One sketch showing trajectory.
